

ENERGY & TELECOMMUNICATIONS SOLUTIONS

Q1 2016

Electricity Supply Options

As electricity supply rates continue to drastically fluctuate, Emendee clients are able to enjoy a fixed-rate for a fixed amount of time. Many Emendee clients have already benefitted from an energy upgrade, which has cut overall costs even more. And, in addition to our very competitive rates, our clients also appreciate how we inform them about their upcoming renewals, avoiding the hassle of much higher month-to-month (variable) rates.

At Emendee Tech, we offer different fixed-rate options from a number of suppliers, often saving hundreds or thousands of dollars per year. In total, Emendee clients use approximately 40 Million kWh's/year!!!

Client Corner

Sisters of St. Joseph

We have been doing consulting work for Joe Angelico, the Director of Operations at the Sisters of St. Joseph, since 2012.

We originally "Right-Sized" their telecom bills. More recently, they moved their offices to the St. Mary campus in Newington. We were able to retain their old phone numbers from West Hartford, and port them to a less expensive phone company. We also installed a new phone system, and took care of the supply solution for their electricity bill.

According to Joe, "Dave transitioned our recent telecom requirements seamlessly. Our existing numbers were active on the requested date. We continually work with Dave for all of our energy & telecom needs."

Do You Still Need Your Fax Machine?

Typically, a phone line costs between \$350 & \$500 per year, depending on the carrier, and the amount of long distance calls.

Many companies offer "hosted" fax services. For a fraction of the cost of a regular fax line, you can receive your incoming faxes as an email. You can also send faxes via email by scanning what needs to "faxed".

You may not only be able to save money on your phone bill, but on the cost your next fax machine, and even a little on your electricity bill!
