

No Budget For a New Phone System? No Worries!

If your premise-based system ever fails, and you're offered a high price to have it fixed (or if your current system is no longer supported), you may want to consider hearing more about a Hosted Phone System. Here's why:

- The actual phone "brains" are located remotely, which lowers your up-front cost
- The phones can be rented, which lowers the up-front cost even more
- Unlimited remote support is included
- Upgrades are handled automatically

One common question is: "What happens when the Internet goes down?" Here's how I answer:

- Incoming calls will still get answered by the auto-attendant, and messages can still be left
- An optional 4-G wireless back-up solution offers a second path in case the Internet fails
- A free Hosted Phone app places your office phone credentials onto your Smart Phone
- A Hosted Phone System inherently has a redundancy solution built right in

Client Spotlight:

Qualidigm, located in Wethersfield CT, has a vision of "leading the way to make New England the healthiest region in the United States".

Part of their 4-story building was already upgraded to LED's, but with a recent change of tenants, it was the perfect time to upgrade the rest of the building.

Our solution included new LED recessed fixtures, wall sensors, ceiling sensors, and faucet aerators (which are small mesh screens that break up the flow of water into multiple small streams, adding air in between... leading to savings on both water and energy bills!).

The results: An immediate savings of over \$200/month, ending with a \$1,600+/month savings beginning in just over 3 years (after the 0% on-bill financing is paid for).

According to Eric Boone (Vice President, Finance & Operations), "Emendee Tech provided Qualidigm with a great opportunity to upgrade our tenant spaces with no negative impact to our cash flow. We are very satisfied with the new lights!"
