

Is Your Company's Data Protected Enough?!?

It has become common place: Corporate computer systems are getting breached on a daily basis. Originally hackers would encrypt your data, and then demand money to make it all work again (a.k.a. "ransomware")... pricing it just right so that you are better off paying them instead of your IT company to fix it. Now, they can simply post your data on the internet for all to see if you don't pay up!

So, how do you know what the right amount of security is for your business? The answer: It's complicated. Fortunately, there are a number of things you can do to protect your business from a data breach, including the basics:

- ✓ Installing Endpoint Detect and Respond on all of your devices
- ✓ Setting up multi-factor authentication
- ✓ Backing up your data regularly
- ✓ Performing regular updates

We can help to connect you to a cyber-security specialist who can identify your potential vulnerabilities. From there, an evaluation of your network will be performed, leading to a comprehensive plan that you can use to protect yourself, your business, and your clients.

Client Spotlight:

Our Lady of Victory Parish
West Haven, Connecticut

Last year, a new phone system was needed in the rectory office at Our Lady of Victory Church in West Haven, CT. Knowing that they would eventually move over to the St. John Vianney campus was a big reason why a hosted phone system was the perfect fit for their needs.

Now, just over a year later, it's go-time. Emendee Tech was hired on as the telecom consultant to make it all happen, including having an internet connection installed at the St. John Vianney site, coordinating the physical move of the phones with the phone vendor, as well as coordinating the move of the computers and computer equipment with the IT vendor. The old services also needs to be disconnected at the appropriate time.

According to Father Kevin Dillon; "I have worked with Dave at Emendee Tech for nearly 10 years, and I count on his energy conservation and telecommunications expertise. He has worked with a number of my peers, and I highly recommend him!"
