

Ways to Save in 2022

As I enter into my 13th year in business for myself, I wanted to stop and say **Thank You** to all of my customers! I can't believe that this is my 50th issue! I've worked with numerous banks, manufacturers, non-profits, medical offices, and over 110 Catholic organizations, schools & churches in the state. Together, we have saved millions!!!

So, if you've already upgraded your lights, have recently upgraded your phone system to a hosted platform, and/or signed up for a fixed electricity supply rate, what other ways can you save in 2022 with our help? Here are a few things to consider:

- ➔ Are you tax-exempt, but paying sales tax on your utility bills?
- ➔ Did you default onto a month-to-month rate for your electricity service?
- ➔ Have your promotional rates suddenly ended with your telecom provider?
- ➔ Do you have the latest in LED technology, which could include sensors & controls?

Together with my business partners, we often cut costs while simultaneously making improvements!

VFD's Can Greatly Reduce Energy Cost!

A VFD, or Variable Frequency Drive, is a hardware and software solution that acts like a lighting dimmer control, allowing for more energy when needed, and less when it is not. Prior to VFD's, equipment such as compressors and HVAC (Heating – Ventilation & Air Conditioning units) simply had an on-off switch. So, compared to driving, it was sort of like traveling at either go 0 or 100 mph!

VFD's can do more than cut costs, including:

- Prolonging the life of motors, belts & couplings
- Lowering demand charges due to a reduced motor start-up energy required
- Reducing humidity levels without affecting the temperature of the conditioned space
