

Electric Vehicle (EV) Charging Stations: Huge Incentives Available!

Experts are predicting that as many as 30% of the automobiles sold in the U.S. by 2030 will be electric vehicles. As battery technology improves, more and more consumers will continue to migrate to electric vehicles.

A Solar EV Charging Station

EV Charging stations will continue popping up in many areas, including in shopping centers, airports, hotels, government offices & along highway corridors. And, to help meet this demand, rebates as high as \$250,000 are now available in CT for companies who invest in EV charging stations!

Whether you are trying to attract or retain customers, employees, tenants, guests, students or worshippers, having EV stations can create many benefits for your business or organization.

For more information, and/or to learn how EV charging stations can you help your organization, contact Dave today!

Client Spotlight: Delamere Woods

Located in Windsor, CT, Delamere Woods offers retirement living for seniors ages 62 and over. They pride themselves on offering independent living without the hassles of owning your own home.

Over the years, their phone system began to fail. Also, their capability to open the front door through their phone system would only work intermittently, which lead to even more problems.

After reviewing numerous possibilities, we installed a Hosted Phone System solution in 4Q21 that not only offered brand new state-of-the-art phones & features, but removed the headaches that an aging premise-based system comes with, including the limited availability of parts and difficult programming instructions. And, their front door can be opened via an i-Phone app that communicates through their phone system!

Debbie Campbell, Director, put it all in a nutshell: “The new Hosted Phone System has been working out really well, and the app makes it very flexible for us!”

If you have an older phone system, contact us for more details on upgrading to the latest & greatest!
