

Hosted Phone Systems & Huge Tax Incentives

If you are considering upgrading your phone system to a Hosted solution, your business may qualify for "Section 179" depreciation. Section 179 allows eligible businesses to deduct 100% of the full purchase prices of qualifying equipment in the year it was put into service. This deduction therefore reduces the tax burden for the year of installation.

As of mid-2022, the 100% deduction applies to purchases made this year. The incentives are slated to decrease each year until it hits 20% in 2025. (Note: Please check with your accountant to see if you qualify for Section 179!)

We typically recommend Yealink Phones with our hosted solutions. As a rule of thumb, the typical cost for Yealink phones is generally between \$150 - \$200 each.

Please keep us in mind for your business as we enter the 2nd half of 2022!

Client Spotlight: Companion Industries Inc.

Located in Southington, CT, Companion Industries is celebrating their 50th anniversary in business this year! Companion Industries is a full-service provider of precision metal and tooling, serving many industries, including automotive, aerospace & medical.

After learning more about their wants & needs for a new phone system, we proposed a new solution that would tie their 2 locations together. The final solution tied in with their paging system, and used the current data wiring wherever possible, and their Wi-Fi where wiring was not available.

Although their monthly cost has gone up, the unlimited remote support bypasses the need to pay for a maintenance plan. And, both customer and vendor calls can easily be transferred between sites.

According to Steve Tosta, Managing Partner: "The new phone system has been a great asset for us to communicate between our 2 locations. Emendee Tech was very helpful in working with the vendor to set up the system in both facilities."
